# What is Configuration Management ("CMI")

# PSYCH!

First of all, have you used...

Drupal 8?

configuration management in Drupal 8?

Features in Drupal 7?

*Have you used “configuration management” in Drupal 7?*

Think about the tools ^^ you use or want to be using.

Think about your wish list, when you came into this session.

# What is Configuration Management ("CMI")

# What is Configuration Management ("CMI")

ALL site settings go in the config table of the database.

# What is Configuration Management ("CMI")

ALL site settings go in the config table of the database.

Obviously that's a lie.

Don't worry, plenty of site settings are confusingly *\*not\** in the config table.

# What is Configuration Management ("CMI")

- ♪ ALL site settings go in the config table of the database.
- ♪ Consistency
- ♪ Features in Drupal 7, “ish” (but simpler)

# What is Configuration Management ("CMI")

♪ ALL site settings go in the config table of the database.

♪ Consistency

♪ Features in Drupal 7, “ish” (but simpler)

#goals

*If you care, chime in!*

# OK but, what *\*is\** configuration?

♪ or, what are configurations?

♪ or...?

♪ Silly you --

“ALL site settings go in the config table of the database.” ← there ya go!

# What?! ...and, How?!

# What?!

Individual configurations -- examples:

`core.extension`

`views.settings`

`views.view.events`

## *(What?! ...and How?!)*

### Config:

- ▶ Entity types (+ bundles): node types, vocabs, custom block types, media types...
- ▶ Modules enabled
- ▶ Views
- ▶ User roles and perms
- ▶ Misc site settings (including those from custom modules)
- ▶ Each menu setup
- ▶ Non-custom block settings
- ▶ Block layout settings

### Not config:

- ▶ Entities -- nodes, terms, users, files...
- ▶ Menu links
- ▶ Custom blocks

## (What?! ...and How?!)

### Config:

- ▶ Entity types (+ bundles): node types, vocabs, custom block types, media types...
- ▶ Modules enabled

# What?! ...and, How?!

☀️ Configuration is tied to one site's unique `hash_salt` (in `settings.php`).

# How?! -- to work with config

- ☀️ “Single item” import/export
- ☀️ “Full archive” import/export
- ☀️ Config editor
- ☀️ Drush -- available commands:  
`drush | grep config-`

# How?! -- to work with config

BUT WAIT! THERE'S MORE! \*

- ☀️ “Import all”
- ☀️ “New,” “Changed,” “Removed”
- ☀️ Active (current setting) and Staged (to be imported)

\* if you commit your config 😊

*Flashback!*

# What is Configuration Management ("CMI")

- ♪ ALL site settings go in the config table of the database.
- ♪ Site settings are stored in a consistent manner.
- ♪ Features in Drupal 7, “ish” (but simpler).  
^^ what??

# ...similar “ish” to Features in Drupal 7

CMI:

Synchronize ALL <sup>LOL</sup> site settings between **identical** sites.

i.e. between different environments of the same project

# ...similar “ish” to Features in Drupal 7

CMI:

Synchronize ALL <sup>LOL</sup> site settings between **identical** sites.

i.e. between different environments of the same project

*(whereas)*

Features:

Organize related config and/or build reusable functionality.

How?! -- to use CMI with Dev > (Test > ) Live

# How?! -- to use CMI with Dev > (Test > ) Live

## **Use CMI with Dev > (Test > ) Live**

What's your process for changing or creating functionality on your Drupal site?

# How?! -- to use CMI with Dev > (Test > ) Live

- ↪ Synchronize between environments
- ↪ Mess with stuff (...“develop”...) in your Dev environment
- ↪ (Test on test/staging environment...)
- ↪ THEN, go live!

How?! -- Site config in your code

# How?! -- Site config in your code

*Reminder!* Drupal stores **\*active\*** site settings in the config DB table.  
...BUT / AND!

yaml (.yaml)

(like so many things in Drupal 8!)

Where?

“Usually” sites/default/files/sync

OR! (if you can) outside your project root

Specify in settings.php:

```
$settings['config_sync_directory']
```

- AND check on your hosting provider directory structure

# How?! -- Site config in your code

*Reminder!* Drupal stores **\*active\*** site settings in the config DB table.  
...BUT / AND!

yml (.yaml)

(like so many things in Drupal 8!)

Config files are... those configurations, in yaml!

Remember those config names? Now as files--

core.extension.yaml

views.settings.yaml

views.view.events.yaml

*Flashback!*

# How?! -- to use CMI with Dev > (Test > ) Live

- ~> Synchronize between environments
  - ~> Mess with stuff (...“develop”...) in your Dev environment
  - ~> (Test on test/staging environment...)
  - ~> THEN, go live!
- 
- ~> NOW with config that's in your codebase! 🎉

# Pain points?

What pain points?

lolololollolololololol

#laughsob

# Pain points

☀️ “Import all” has no confirmation screen -- what!?

# Pain points

## Learning the errors / warnings

- ▶ The following items in your active configuration have changes since the last import that may be lost on the next import.
- ▶ ...your thing depends on *cute.puppies.settings* which does not exist...
- ▶ ...cannot delete *fields.field.field\_dog\_rating* because there's data...
- ▶ UUID mismatches (not an error, just annoying)
- ▶ Blocks (ugh)

## Learning names of configs

Everything at once, OR, tiny pieces one at a time

New/changed configs due to updates

Pain specific to committing your config...? Not really.

- ▶ Simplicity, compared to Features

Why you should **Commit! Your! Config!**

# Why you should **Commit! Your! Config!**

Version control.

VERSION CONTROL!!

V E R S I O N   C O N T R O L

Mini-flashback:

*Everything at once, OR, tiny pieces one at a time*

^^ **UNLESS** you **Commit! Your! Config!**

(If time allows)

# Modules

- ⚡ [Configuration Manager](#) in **Drupal 8 core**
- ⚡ [Config ignore](#) -- completely ignore certain configurations (examples)

*If you care, chime in! Don't let  
the convo only be between  
"core developers."*

# Your next steps...

1. Enable “configuration manager” (core module)
2. Export your site’s configuration (admin > configuration > development > configuration synchronization > export > download the whole archive)
3. Extract those files to a location in your repo that makes sense for you (see slide 32)
4. Update settings.php with where you put those config files (see slide 32)
5. Commit those files to your repo
6. 🎉 PARTY 🎉
