

Speed Up Drupal 8 deliveries with CI/CD Pipeline

   [gobinathm](#)

Agenda

- DevOps in Drupal
- Benefits of our Adaptation

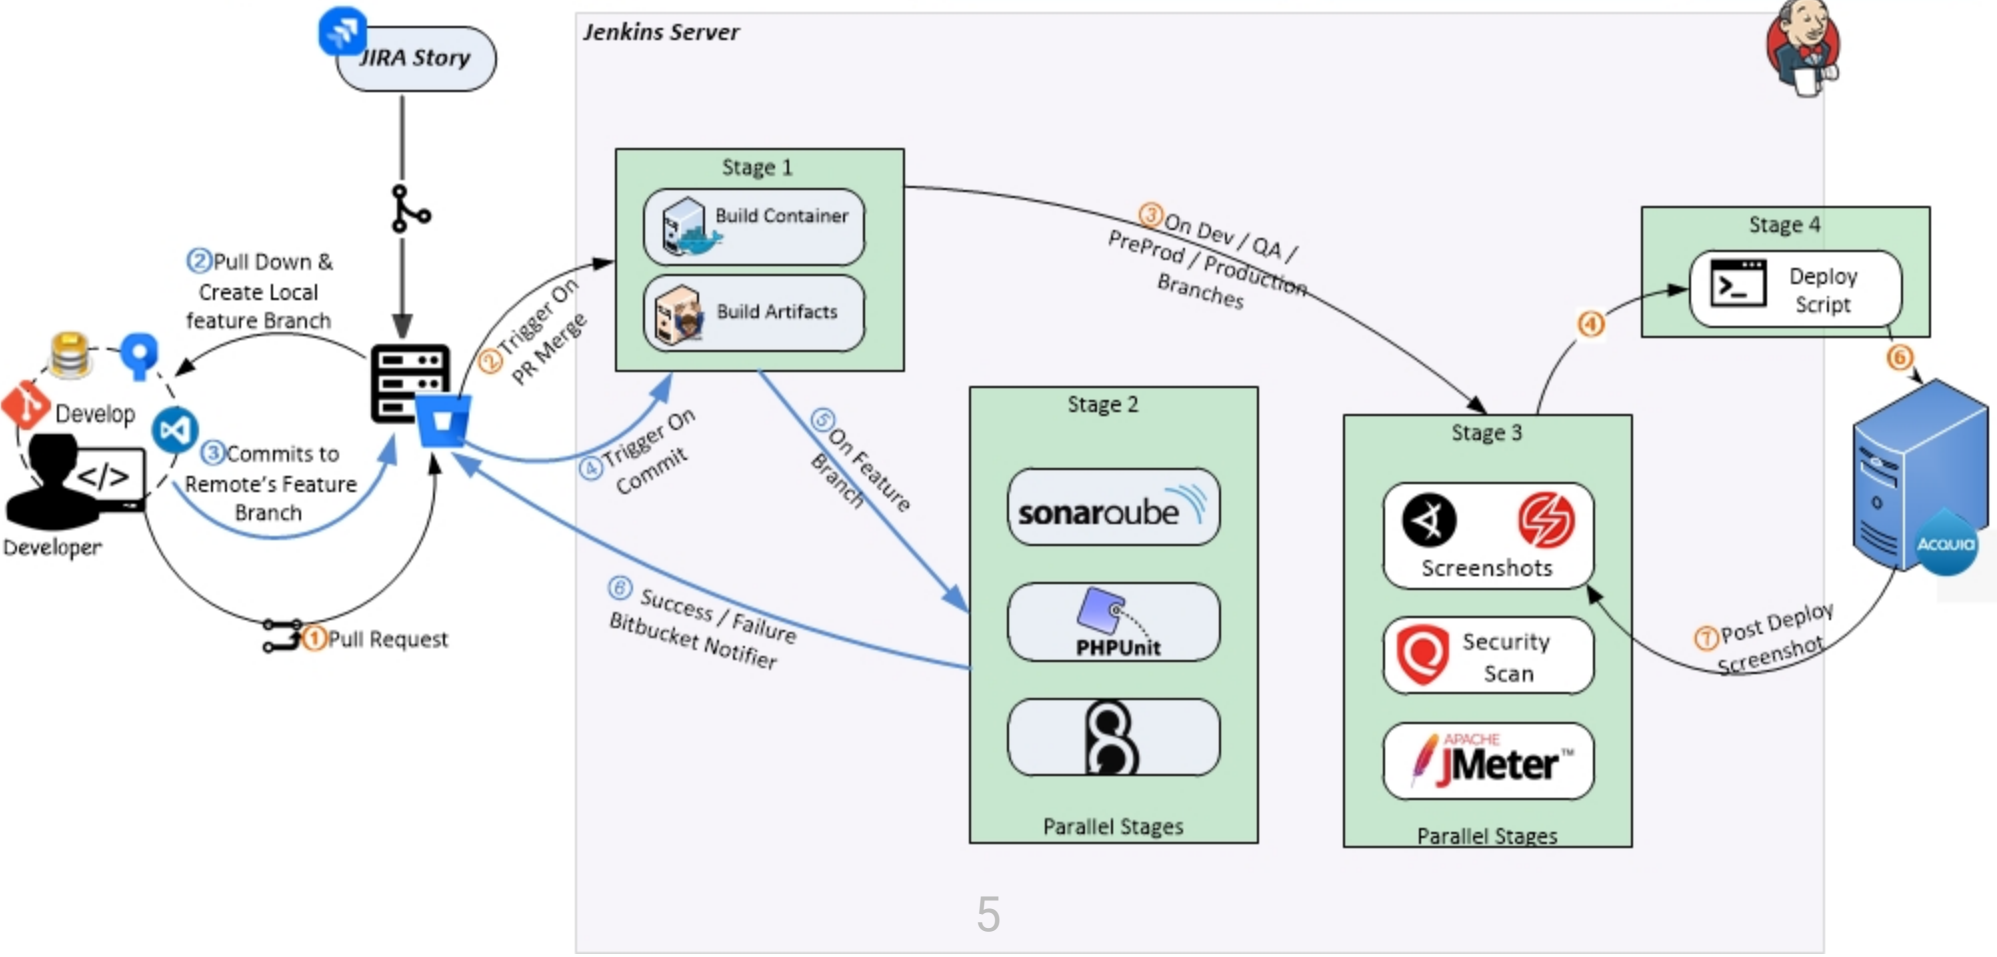

Who am I

- Platform Architect / Technical Manager
- Works in Web / Mobile Application Development, with primary focus being drupal
- Webmaster in Drupal.org
- I Mentor New Contributors

[gobinathm](#) everywhere (including D.O)

The LifeCycle

Is this an epic DevOps Life Cycle Yes atleast in my world atleast 😊

Composer Workflow

1. You Don't be a Dependency Manager leave it to Composer.
2. Special Script to build / patch
3. Alternatively once can use [phing/phing](#)
4. Better to build artifacts this way
5. Commit composer.lock to your repo

[D8 Starter Kit](#)

Review Stage

1. Local: It Start with Local, Yes enforce before commit & Save time.
 - One easy way to achieve is [grumphp](#)
 - Alternative is Custom GIT Hooks
2. Server: Sonarqube, quality scan
 - Use [sonarlint](#) IDE Extension & save build times.
3. PHPUnit
4. [Behat](#)
5. [lighthouse](#), automated webpage audit tool

PreDeploy

1. Save Time by page screenshot by leveraging tools like applitools & saucelabs.
2. Performance Testing with JMeter (Or) Blazemeter automation

PostDeploy

1. screenshot by leveraging tools like applitools & saucelabs for comparision.

Q & A
